

What is claimed is:

1. An electronic apparatus comprising:
a housing having a transparent member; and
a luminescent panel formed in the housing,
the transparent member having electrodes on one surface thereof and
being integrated with the luminescent panel.
2. An electronic apparatus according to Claim 1,
the luminescent panel being a transparent panel comprising a
transparent component.
3. An electronic apparatus according to Claim 1,
the transparent member having a curved surface, and
the luminescent panel being formed along the curved surface in a
curved manner.
4. An electronic apparatus according to Claim 1,
the area of the transparent member corresponding to the area not
provided with luminescent elements of the luminescent panel being
treated so as not to transmit ultraviolet light.
5. An electronic apparatus comprising a luminescent panel therein,
the area provided with the luminescent panel being filled with an
inactive gas.

6. An electronic apparatus comprising a luminescent panel therein, the area provided with the luminescent panel being evacuated.

7. An electronic apparatus according to Claim 5 or 6, the luminescent panel comprising a transparent flexible component.

8. An electronic apparatus according to Claim 7, further comprising:

a controlling device for controlling the drive of the luminescent panel, opposing a non-displaying surface of the luminescent panel, the luminescent panel being curved such that a surface for displaying information of the luminescent panel is convex, and electrode lead-out portions provided at ends of the luminescent panel in the curving direction being connected to the controlling device.

9. An electronic apparatus according to Claim 8, the curving direction being substantially perpendicular to the longitudinal direction of the electrodes provided in the luminescent panel.
